

GT Cooling System

CUTS HEAT AND HUMIDITY IN THE BEST HIGH-PERFORMANCE ANTI-HYPERTHERMIA HELMET & DRIVER SUIT AVAILABLE

Features

This is the SUPER GT GT500, 2009 NISSAN GT-R COOLING SYSTEM, the one that has been making waves ever since.

These days, the race scene talks about nothing else.

We've applied production car cooling design to the whole race car system, which prevents hyperthermia to knock any suit's and helmet's internal heat and humidity count down to near nothing.

The Driver Cooling System product line includes the "GT Air Conditioning System", the "GT Cooling Seat" & the "GT Cooling Helmet Cover". Please buy just what you need.

GT AIR CONDITIONING SYSTEM

Currently, the GT air conditioning system is reviewing its components.

Please inquire details.

GT COOLING SEAT

Beyond providing general air conditioning for the driver, the system targets body hotspots such as the neck, shoulders and feet in order to provide direct air flow to the most heat taxed body parts. A dry carbon GT PRO II model & a wet carbon GT PRO III model are available. Both can be supplied with or without the NISMO logo.

<GT PRO II / with NISMO logo >

<GT PRO III / with NISMO logo >

Specifications

- FIA CERTIFIED
- HANS ASSIMILATED
- Weight: GT PRO II / 6.5kg, GT PRO III / 10.5kg
- International patent pending
- Can be used with your automobile's air conditioning system

Conditions

An outer shell is molded around a racing model full bucket seat to create an insulation space into which cool air is injected.

The cooling air also flows out through eighty-four 10mm diameter ventilation holes flooding the entire driver's body with temperature lowering refreshment. Further, cooling effect can be obtained by injecting outer fresh air instead of cooled air.

At the same time the outer shell sticks to and reinforces the seat's form to provide greater rigidity.

Kit Contents

1 SEAT

Conditions

For Racing Cars ONLY (not allowed on public roads)

Guarantee

Because this product was manufactured for Racing Cars, there is no guarantee

Prices

Part	Part no.	Price	Price with tax	Notes	
GT Cooling Seat	GT PRO II ¹	87010-RR010	¥ 800,000	¥ 840,000	Dry carbon fiber with NISMO logo On demand production
		87010-RR011	¥ 800,000	¥ 840,000	Dry carbon fiber without NISMO logo On demand production
	GT PRO III	87010-RR020	¥ 280,000	¥ 294,000	Wet carbon fiber with NISMO logo On demand production
		87010-RR021	¥ 280,000	¥ 294,000	Wet carbon fiber without NISMO logo On demand production

NOTE 1) This seat is modeled after the slim build of NISMO team drivers.

Warnings

GT COOLING HELMET COVER

Beyond providing general air conditioning for the driver, the system targets body hotspots such as the head in order to provide direct air flow to the most heat taxed body parts.

GT COOLING HELMET COVER & HOSE ADAPTERS

SUPER GT GT500 MOTUL AUTECH GT-R
AS USED BY MOTOYAM SATOSHI

Specifications

- Polycarbonate light-weight cover
- Can be attached to the car's native air-conditioning system

Conditions

- The cover surrounds the entire helmet with a resin shielding and low temperature air is injected within in order to cool the driver's head.
- Most racing helmets are made with several ventilation holes. These allow the circulation of cooler air that brings the helmet's ambient temperature down and refreshes the driver. There is nothing more important than "keeping a cool head" when race driving: this is the equipment that will do that most efficiently.

Kit Contents

< GT COOLING HELMET COVER >

- helmet cover
- helmet hose adapters
- ducts (necessary for installation)

< HOSE ADAPTER >

- adapter

Guarantee

Because this product was manufactured for Racing Cars, there is no guarantee.
